1. A method for preventing out-of-ordering of frames in a network switch, comprising the steps of:
 - receiving a first portion of a string of packets from a source [port] on a first port;
 - transferring said first portion of said string of packets to a second port for transmission to a destination;
 - sending a switch indicator from said first port to said second port;
 - receiving said switch indicator at said second port;
 - sending a response switch indicator from said second port to said first port in response to said receiving of said switch indicator at said second port; and
 - receiving a second portion of said string of packets from said source port on a third port, wherein said transmission of said first portion of said string of packets to the destination is performed after the response indicator is received at said first port.
